70 years of history

Founded in 1947, Radoux has succeeded in taking its place among the top barrel makers over the course of several decades.

Thanks to its expertise in the knowledge of oak and investment in Research and Development, it has gained the trust of the greatest wine estates the world over.

Situated in Jonzac, in the heart of Cognac, and specialized since inception in the manufacture of barrels for spirits, Radoux is also a reference in the spirits market.

Radoux has a team of professional coopers, including Meilleurs Ouvriers de France who pass on their knowledge and supervise every stage of the manufacture of the barrels. Radoux combines traditional craftsmanship with technological skills, thus guaranteeing the quality, homogeneity and consistency of its barrels.

From selecting the wood to consulting with winemakers, Radoux preserves the tradition of French cooperages.

Recognized worldwide as a top-quality cooperage, Radoux barrels can be found in over forty countries.

Bringing together two brands of international importance: Radoux and Pronektar – Radoux is part of the **TFF Group**, undisputed world leader for barrel making for aging wines and spirits, as well as wood products for oenology.

Wood expertise

Complete control of oak supplies

Of the many existing oak species, only three are traditionally used in barrel making :

Sessile oak (*Quercus petraea*)

which grows more slowly and has a tight grain particularly suited to the aging of wines.

Pedunculate oak (*Quercus robur*)

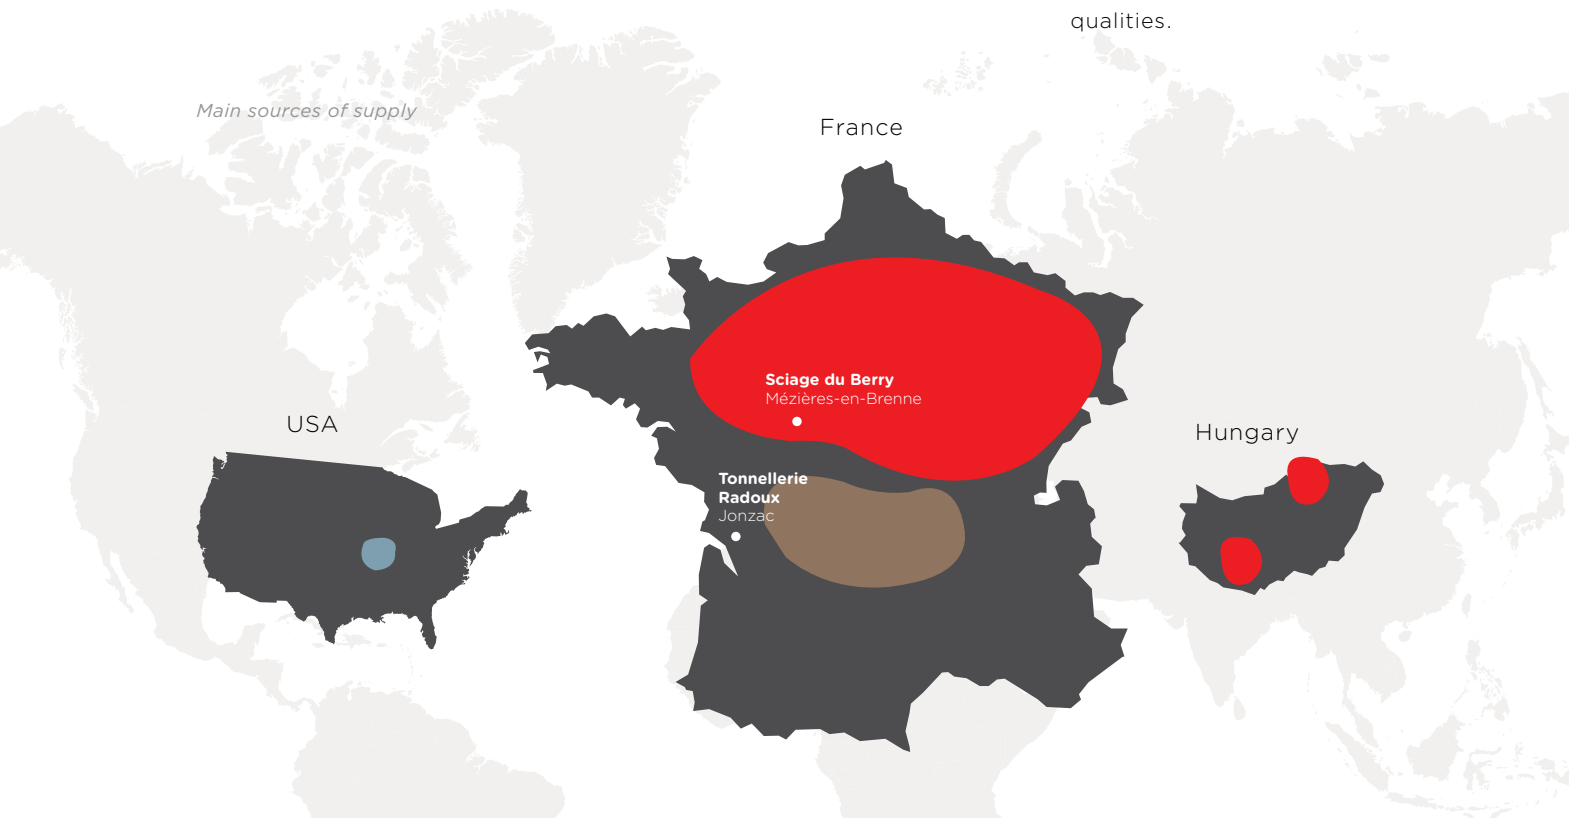

which grows more quickly and produces a wider grain, used more commonly for aging spirits.

American oak, or « white oak » (*Quercus alba*)

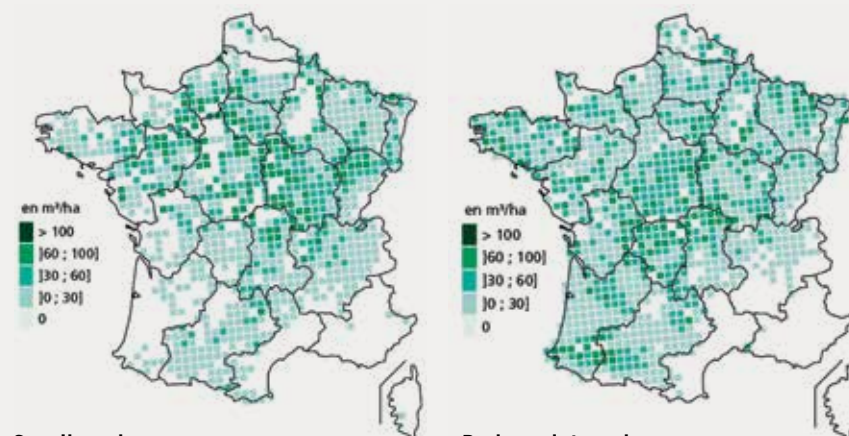

which grows more rapidly than French oak and has more aromatic, rather than tannic, qualities.

Radoux has its own team of wood purchasers. We source our wood from the ONF and sometimes from private producers.

Our buyers select the best oak specimens from the most prestigious forests in the Centre and North East of France and worldwide. This is an essential stage which relies on a perfect understanding of the raw material, human expertise, and scientific research.

Thanks to its dedicated purchasing department and integrated saw mill, Radoux is able to fully control and secure its supplies.

Sessile oak
***Quercus petraea* Liebl.**

Average volume per hectare

Pedunculate oak
***Quercus robur* L.**

The notion of origin does not guarantee the selection of the species

Sourcing by origin is traditionally the first step in selecting the wood.

Sessile and pedunculate species can be found in most of the supply areas in France.

However, neither the geographical region, nor the forest alone can provide a guarantee of quality.

This is why Radoux has added two additional criteria : grain size and our proprietary OakScan® technology

A strict selection by grain

EXTRA TIGHT GRAIN :

Used to make our Super Fine **Blend** and Extra Fine **X-Blend** barrels meant for lengthy periods of aging.

TIGHT GRAIN :

Radoux's reference and heart of the range, the Tight Grain Selection is meant for traditional aging.

ALLIANCE/MIXED GRAIN : (MEDIUM & TIGHT GRAIN)

A blend of tight and medium grain, this selection is meant for shorter aging, combining moderate aromatic richness with structure on the palate.

MEDIUM GRAIN :

Usually used for shorter aging periods, this selection is characterized by a lower, but more rapid aromatic contribution.

WIDE GRAIN :

Mainly used for aging spirits, this category of grain is characteristic of Limousin oak.

The grain, or growth ring of the wood is inseparable from the quality of French oak.

The grain corresponds to the average width of the growth ring of the tree : the smaller it is, the tighter the grain. Each piece of timber is therefore selected according to its grain and is assigned a specific quality corresponding to a particular product within the range.

Extreme tightness of the grain will give wine a great aromatic complexity, a delicate structure, and fine and soft tannins, which will be released gradually during the aging process. As a result of research which highlighted the prominence of grain over origin, Radoux was quick to integrate this into the selection of its wood, and created, back in the 1990s, the first barrel to be made from a blend of forest origin sorted by extra-tight grain oak : the Super Fine Blend.

IMPORTANCE OF GRAIN IN CONTRIBUTION OF AROMAS

Analyses show that levels of lactones drop from the tightest to the widest grain.

LEVEL OF GAMA-OCTA LACTONES
CIS+TRANS ACCORDING TO GRAIN

Sources internes (2016 / R&D Radoux)

LEVEL OF TANNINS ACCORDING TO GRAIN

Analysis of samples graded according to grain, show tannin levels (evaluated by their polyphenolic index) increase from the tightest to the widest grain.

LEVEL OF TANNINS
(POLYPHÉNOLIC INDEX)

Sources internes (Juin 2008 / R&D Radoux).

OUTCOME : grain sorting tends towards better control of aromatic and polyphenolic levels.

A stave mill in the heart of a protected site

In the heart of the Brenne Regional National Park and a site classified Natura 2000*, our stave mill is spread over a vast estate of several hectares.

This natural area, where the quality of the air and water is preserved, provides **exceptional environmental conditions** for perfect wood seasoning.

Because of its location in Mézières-en-Brenne - equal distance from the main forests - the carbon footprint associated with transport of the timber is limited.

In this workshop logs are split, not sawn, to respect the grain of the wood and to obtain rough staves. Wood for oenology, under our brand name **Pronektar**, is also produced in Mézières-en-Brenne.

Maturation, a key stage

Radoux uses its own method to stack the rough staves to ensure they are well ventilated and watered for the best possible maturation.

They are left outside exposed to the sun, wind and rain for a minimum maturation period of **two years**, and up to over **three years**.

This 100% natural drying process in the open air helps reduce the level of tannins in the wood. It also aims to eliminate certain negative odorous compounds and to obtain a moisture content of between 14 and 17%.

By respecting the maturation time, the aromatic and phenolic compounds are able to gradually transform and when subjected to a controlled toast, will release the characteristics which will contribute to the quality of the wines or spirits.

An ultra-modern production facility, our stave mill respects strict rules pertaining to **traceability, control and safety**, which enables us to guarantee an optimum quality for our wood.

* Natura 2000 brings together natural or semi-natural sites within the European Union which have great heritage significance because of their fauna and flora.

Research and development

OakScan[®], the first scientific innovation applied to the selection of wood.

Radoux pursues its ambition of controlling its raw material to ensure it is an essential partner in precision oenology.

At the end of the 1990s, Radoux introduced new criteria into its process with regard to selecting wood: selection by grain. This, together with the research carried out on the control of raw material, led to the perfecting of the Oakscan[®] process.

At the beginning of the new millennium, Radoux set up its Research and Development department to improve its knowledge of the raw material and further its scientific study of the production process.

The team, which is made up of engineers and oenologists, works in close cooperation with numerous organisations: INRA, IRSTEA, l'Institut Supérieur de la Vigne et du Vin (ISVV)... It also has strong support from partnerships with foreign universities (South Africa, Spain, USA...) and takes part in various conferences (ASEV, MacroWine, OIV...).

By organizing many trial programs, from the selection of the oak to the sensory analysis of finished wines, the team has succeeded in gathering extremely precise information which enables them to offer a range of qualified and reproducible toasts.

Instantaneous measurement of tannins in wood

Tannins have a major impact on the organoleptic properties of the wines or spirits they enrich. They change the sensory profile, the tannic structure, the colour, and have a protective role with regard to oxidative breakdown.

Until now, only chemical measurements carried out in a laboratory enabled us to measure ellagitannins. These measurements could only be made by taking random samples from batches of rough staves and took a long time to obtain.

In 2008, after several years of research, Radoux's R&D department launched the world's first process to instantly measure the quantity of polyphenols contained in staves: **OakScan[®]**.

The process

OakScan® is a system of rapid analysis, stave by stave, based on Near Infrared Spectrometry. Each stave entering into production is scanned and marked with a letter (« F » on the particular batch in the photo to the right).

This letter indicates which category of tannic potential it belongs to.

It helps the coopers sort the staves more easily and make barrels with specific polyphenolic indexes (PI).

This index estimates that the polyphenolic content of the wood is between 0 and 100.

After ten years of using the system and over **10 million analyses**, **Radoux now has the largest database in the world on the chemical composition of French oak.**

A unique database on the chemical composition of wood.

Radoux's R&D team regularly carry out trials to highlight the impact of **OakScan® selections on the organoleptic properties of wine.**

These tests are executed on a large scale in co-operation with many oenological institutes, including the ISVV of Bordeaux, on wines coming from the finest wine regions in the world.

Over three hundred trials of **OakScan®** selections have been performed since 2008. Each time, the trials have proved their value in the world's finest vineyards (France, USA, Spain, Italy, Chile, Australia, China...) and on different grape varieties (Chardonnay, Sauvignon Blanc, Merlot, Tempranillo, Syrah, Cabernet Sauvignon, Pinot Noir...).

The three pillars of oak selection

1st criterion:
ORIGIN

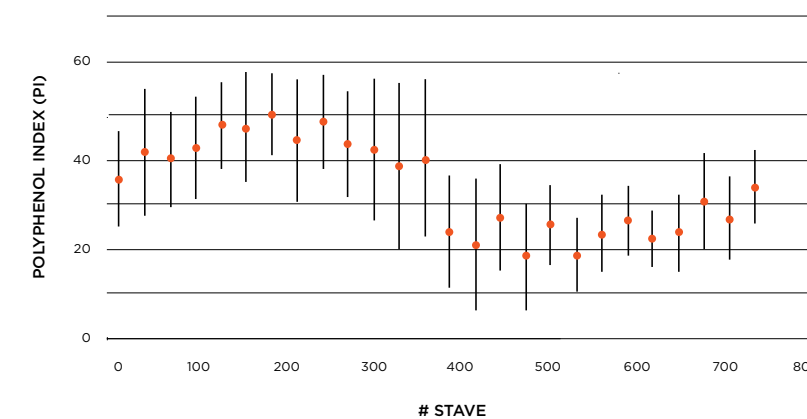

2nd criterion:
GRAIN*

3rd criterion:
OAKSCAN®

Example of the natural distribution of tannins in two batches of wood

Each dot represents a barrel made of approximately thirty staves which have not been sorted.

Example of a selection made from these two same batches

Each dot represents a barrel made from a batch of approximately thirty staves sorted with the help of **OakScan®**.

Toast :
a precision
art

Qualified, reproducible toasts

From selecting the wood to consulting with wine-makers, Radoux has preserved the French tradition since 1947.

At Radoux cooperage, the skills and savoir-faire of our coopers is essential and irreplaceable. Its teams are made up of many professional coopers and **Meilleurs Ouvriers de France**.

Radoux combines the hands on, manual skills of its craftsmen, (visual control of the staves, positioning of heads, toasting...) with top quality technology guaranteeing quality, homogeneity and regularity of its barrels.

The control of the toasting process is a fundamental part of the organoleptic expression of the wood.

The toasting process helps generate the main aromas which can enhance wines and spirits and significantly modify the quality of the sensations on the palate (texture, volume, sweetness).

Our R&D department has developed a wide range of toasts for wine as well as a specific range for spirits.

Our traditional toasts have been studied so that depending on the origin of the wood, its grain, the grape variety and length of aging, they bring either a discreet or more marked tannic content and aromatic flavor.

Everything is done to control the temperature inside the barrels, thus enabling us to offer qualified and reproducible toasts which meet with precise oenological objectives.

Radoux toasts

The pre-toast is the first stage of Radoux's toasting process. Gradual heating helps prepare the staves for bending, tightening and shaping into barrels. This stage is carried out in the traditional way, using a wood brazier and water.

The second stage involves a slow, prolonged heating of the barrel. This helps to fix the final shape of the barrel and establish its organoleptic profile. It is crucial that this stage be fully controlled as it allows for a harmonious development of aromas and preserves good structure.

The heads represent around 30% of the surface exchange between the wood and wine. A unique toasting process is offered as an option to strengthen the aromatic complexity and optimize the homogeneity of the toasting of the barrels.

Each barrel entering the toasting process undertakes a strict control of the length of toast and its intensity.

Toasts for red wines

Example of Pure to Medium + toasts

PURE

Respect of fruit and character

Pure toast is meant for wine-makers who are seeking the purity of the wine, the respect of the fruit and the terroir. It is carried out at low temperatures over a long period. This gentle, deep toast helps preserve the original aromas of the wine. Its long, delicate interaction with the wood's tannins generates volume, finesse and length. It gives remarkable texture in the mouth.

The Pure toast, associated with tight grain and Oakscan wood selection, respects the raw material and enhances the wine, giving expression to the fruit while respecting its origin.

REVELATION

Harmony and softness

Revelation toast is moderate, aimed at generating soft aromas (creamy, vanilla). More intense than the Pure toast, it is suited to wines with good structure, to which it will add more volume, while respecting the profile of the fruit.

EVOLUTION MEDIUM

Roundness and elegance

Evolution medium toast favors the fruit and the roundness of the tannins. This toast is carried out in two stages and results in balanced aromas, round tannins in the mouth, and additional sweetness.

CLASSIQUE MEDIUM

Intensity and structure

Classique medium toast is meant for long aging periods and wines with good aging potential. Well rounded aromas, sweetness and volume are developed thanks to this slow, prolonged toast.

EVOLUTION MEDIUM +

Roundness and complexity

Evolution medium+ combines a long and intense toast in the initial phase with a more intense « boucinage », resulting in intense tasty aromas (brioche, caramel..) with roundness and sweetness on the palate.

CLASSIQUE MEDIUM +

Richness and volume

This is an intense toast, meant for long aging periods. It stands out by leaving remarkably long-lasting aromas on the palate.

HEAVY

Aromatic strength

This toast brings woody, toasty and chocolate notes, a rich aromatic palette combined with power on the palate.

INTEGRATION

Mellowness and finesse

Integration toast was created to satisfy specific requirements of delicate wine varieties which are sensitive to tannins. Some toasted notes on the nose, with an excellent integration of tannins in the mouth in the first months of aging.

Toasts for white wines

PURE

Freshness and purity of the fruit

—

This toast is for winemakers who are seeking respect of the grape variety and freshness for their white wine. It can be adapted to Chardonnay type wines, to maintain their tension, or to Sauvignon Blanc wines to respect their freshness. It has very little impact on aromas, but good intensity mid-palate and an overall persistence.

REVELATION

Sweetness and softness

—

Slightly more aromatic than the Pure toast, its aim is to soften the white wines, with light notes of vanilla. It is suited to rich, concentrated white varieties.

EVOLUTION

Roundness and volume

—

Evolution gives priority to the roundness of tannins and is meant for wines to be drunk young. Moderate contribution of aromas, with a lot of sweetness on the palate.

CLASSIQUE

Power

—

Classique is meant for rather long aging and for white wines with long aging potential (sweet wines). A complex aromatic contribution, it can also reinforce the volume and persistence on the palate.

INTEGRATION

Delicate structure

—

Very moderate contribution of structure, it can reveal toasted notes on the nose. It has a delicate tannic impact and is suited to varieties which take on the oak rapidly.

Toasts for spirits

It is while it is aging in barrels that a spirit gains its color and aromas.

The **Spirit Heavy** toast rapidly brings an amber color, aromas of mocha, licorice, roasted almonds, and subtle notes of vanilla.

The **Spirit Medium** and **Medium Plus** toasts give less color and more complex vanilla aromas which will express themselves more over time. They are suited to a longer aging period.

Spirit Pure toast brings even less color and enriches the spirits with delicate oak notes, spices and lactones.

Toasts for American oak

Temperature and length of toast have been developed to reduce the "whisky lactones" typical of American oak. This results in a barrel of great aromatic complexity, with more spicy, balsamic notes, the American character being present in a subtler way. These toasts are generally suited to all types of aging.

Softness and balance

This is suited to both white and red wines. Its aromatic contribution is marked by soft notes such as coconut and vanilla which make the fruity profile more complex.

Aromatic intensity and complexity

This toast is more complex, bringing more intense, spicy, toasted, caramel notes and a greater persistence on the palate. It is recommended for the aging of red wines and also for white wines.

	NOSE				MOUTH			
	SPICES	VANILLA	FRESH WOOD /COCONUT	GRILLED/TOASTY	FRUITY	SWEETNESS	VOLUME	PERSISTENCE
CLASSIQUE MEDIUM
CLASSIQUE MEDIUM PLUS

With our extensive experience of sourcing American oak, we select our white American oak (Quercus Alba) from the finest forests.

In the region of Missouri, the white American oak is rich in lactones, low in tannin content, and contributes notes of vanilla, coconut, and sweetness. Our barrels offer a beautiful aromatic complexity of vanilla, caramel, chocolate, spices, and smoky notes.

After strict selection, our wood is aged and milled by our exclusive partner in Missouri. During maturation, which lasts over two years, rough staves are exposed to the rain, wind and sun, seasoning over many months. This is an essential stage which contributes finesse and aromatic complexity.

The fact that we continuously get our oak from the same source enables us to guarantee a consistent aromatic profile of our barrels from one year to the next.

Our collection

Extra Fine X-Blend, state-of-the-art selection by grain

Radoux was a pioneer when creating its BLEND range, introducing the barrel into the world of luxury at the beginning of the 1990s. Extra Fine X-Blend and Super Fine Blend meet with the highest oenological standards and are the result of an exceptional selection of wood and the unique skills of our Master Coopers.

Result of a demand for perfection taken to the extreme, Extra Fine X-Blend is the ultra-premium barrel for the best wines in the world. It is produced in very limited quantities by a dedicated team made up of our Meilleurs Ouvriers de France.

Extra Fine X-Blend barrels are subject to an unequalled standard of quality and are made from a strict selection of exceptional wood from the finest French oak trees.

With pin-point precision, each stave is individually inspected with care before being selected. The extreme tightness of the grain guarantees a great aromatic complexity. This challenge leaves no room for compromise and every year, only one to two hundred numbered barrels come out of the Radoux workshop.

The finish of the Extra Fine X-Blend barrel is the focus of attention throughout the production process and is, in one word: exceptional. Each stave is scraped by hand and a glass bung gives the final touch of elegance to this barrel. The toast of each barrel is defined with great care by the Cooperage's Sales Manager/Oenologist in consultation with the customer. It is then monitored by the Heads of Research & Development and Quality to ensure everything is done to perfection. An individual certificate of authenticity is issued upon delivery of each barrel and after sales service is guaranteed throughout the life of the Extra Fine X-Blend barrel.

This exceptional barrel will bestow its richness, complexity and finesse over long periods of aging.

Super Fine Blend, the perfect harmony between wood and wine

It is an ideal of perfection which led to the creation of the Super Fine Blend barrel. A subtle blend of the origin of the wood and the tightness of the grain, this barrel has been satisfying the most demanding winemakers' requirements for many years.

The wood we select is rare and is subject to a specific purchasing policy in the finest forests.

Super Fine Blend is therefore produced in limited quantities, depending on the raw material available. This is also what makes it a very sought-after barrel, singled out by the most prestigious wine estates all over the world.

The tightness of its grain gives the wine maximum aromatic complexity, released gradually during aging, giving a delicate structure with fine, soft tannins. Its very high aromatic potential, with gentle extraction, represents a real investment in quality for winemakers. Super Fine Blend is recommended for long aging periods and can show its worth over several winemaking cycles.

Super Fine Blend is the most widely distributed premium barrel in the world today.

Omega, excellence by nature

Radoux's new **Omega** barrel is the result of years researching wood, toast and its interaction with wine. It combines all the skills of Radoux's research and production teams with the support of wine experts, renowned consultants, technical directors and international winemakers.

Great care in the selection of raw material and natural maturation for over three years.

The wood comes from a subtle blend of oak from the most prestigious French forests. The rough staves dry naturally in the open air for three years and only tight grain staves are selected.

Omega benefits from Radoux's technological innovation OakScan®, which enables the staves to be instantaneously selected according to their polyphenolic index. This process enables us to fine-tune the selection of wood and favour the choice of moderate polyphenolic indices so as to obtain a perfect balance of the potential of the wood (a tannin and lactone content that is neither too high nor too low). Thanks to the combination of OakScan® and wood maturation of over three years, Radoux is able to guarantee a homogeneous level of ellagitannins and wood that is perfectly suited to the oenological objectives.

Pure : a specially adapted toast

Radoux has developed a specific toast for the **Omega** barrel to promote the bond and integration of wood and grape tannins. Thanks to a thermal action on tannins in matured and seasoned wood, a gentle and long heating process preserves the sweetness of the wood while allowing the wine to acquire volume and texture. In this way, the quality of the raw material is fully respected and the wine is enhanced.

Respect of the fruit and character

Tasting reveals that the **Omega** barrel gives emphasis to the fruit, with a balance between roundness, volume, tension and length on the palate. The tannins are soft, expressing freshness, elegance and finesse. The complexity of the aromas highlights the expression of the fruit, while respecting its origin.

Tailored selections can also be offered on barrels marked OS

Large barrels

While enabling the micro-oxygenation of the wine, our larger barrels (300L to 600L) bestow a more discreet oak character because of a smaller ratio of wood to wine. They are recommended for aging and can be adapted for vinification, allowing a permanent exchange between the pomace and the must.

Spirit barrels

Because of our geographical situation in the heart of Cognac, we have acquired considerable expertise with regard to making spirit barrels and are proud to have the most famous Cognac houses amongst our clients. We are also developing our skills to create profiles suited to the aging of other brown spirits such as whisky or rum.

For spirits, aging in oak barrels results in a harmonious exchange between wood, product and air. It is during this phase that a spirit gains color and aromas.

To make wide grain spirit barrels we use exclusively French oak, preferably from forests near the Limousin region. The quality of this oak is recognized as being ideal for spirits. The wood is denser, allowing for gradual oxidation and limiting evaporation.

Our tight grain oak comes from Central and Eastern France. Its contribution to color is less intense than wide grain oak, and it imparts an aromatic complexity made up of spices and lactones.

Thanks to our expertise in barrel making and strict selection of wood, the quality of your spirits can be fully expressed.

Innovation and custom-made products, Radoux's DNA

Since its creation, Radoux has made constant innovations, always anticipating the requirements and expectations of its customers. Our teams, with the support of experts, can offer solutions to the most diverse problems.

Our research has led us to understand and improve the interactions of wood with spirits such as tequila, ouzo, raki, gin, vodka... but also, more recently, with beer.

Over the last few years we have seen the development of special beers, the creativity of this sector, and the return to traditional brewing and aging methods using oak barrels. Our exchanges and trials with brewers are growing and we notice that in a market where the need for innovation is constant, oak is an essential ingredient in differentiating and enhancing these beers which have such a strong identity.

Our R&D team has the support of experts and professionals such as the Institut Français de la Brasserie et de la Malterie (Qualtech) of Nancy to qualify and experiment with different oak profiles.

We can offer brewers custom-made solutions to develop unique products. Together, we can create your formulas for beer with that special oak character.

Tables of recommendations

In the following tables, we have set up a classification of eight wine profiles in order to propose the most appropriate aging methods depending on the objectives you are seeking for your wines.

These profiles have been defined according to the wine varieties, the characteristics on the nose and palate of basic wines. Depending on the size of the container, the origin of the wood, the selection of grain and the type of toast, we recommend for each wine the intensity of aromas and structure and the optimum aging periods.

Several technical strategies are suggested for these categories:

- Toasts at fairly low temperatures to obtain freshness
- Long or intense toasts to obtain more complex aromas and increase sweetness
- Medium toasts for a good balance aroma/volume
- Larger barrels to reduce the ratio wood/wine
- ...

This list is not exhaustive and can be adapted according to the style of wines required.

Classification of wines

Profile of concentrated, balanced red wines	p 50/51
Profile of very mature red wines	p 52/53
Profile of varietal red wines	p 54/55
Profile of delicate red wines	p 56/57
Profile of delicate varietal white wines	p 58/59
Profile of mature, concentrated white wines	p 60/61
Profile of liqueur wines and natural sweet wines	p 62/63

Spirits	p 64/65
---------	---------

Profile of concentrated, balanced red wines

- **Varietals:** Merlot, Syrah, Malbec, Cabernet Sauvignon, Cabernet Franc, Tempranillo, Carignan, Marselan, Mourvèdre, Monastrell, Corvina, Montepulciano, Saperavi, Boğazkere.
- **Nose:** mature, but not over-ripe fruits with no vegetal notes. Aromas of dark fruits (cherry, blackberry, blueberry), spices (licorice, black olives), flowers (violet), mineral (shale, hot stones).
- **Palate:** concentrated and well balanced with a high tannin content, fatty, balanced acidity, tannins which are solid, mature, round, with no astringency, lingering, and sometimes sticky.

Advice before use

For immediate use

If you will not be using your barrels for several weeks or months

Keep in the original packaging.
Store in place with following characteristics :

- Good hygrometry (75% - 80%)
- No draughts
- Low level of light
- If necessary, cover the barrel with a tarpaulin (limit exposure to U.V.)

IN CASE OF LEAKAGE

- Leave to drain, then leave to dry for an hour.
- Re-start method B.
- Empty the barrel, leave to drain and rinse with water.

NB : if leaks re-appear, contact our Technical Department who will, if necessary, intervene on the spot

We are working with a complex, natural product. We check our barrels with water and pressurization at two stages of production. We also advise that the barrels be prepped with water in the cellar prior to use. In spite of all this, barrels can present leakages when filled with the wine or spirit, which cannot be prevented.

INTERPRETATION OF THE TRACEABILITY OF YOUR CODES

(OF = production order)

* subject to technical feasibility

Vats and Casks

Radoux, Cask maker since 1947

Radoux is one of the rare barrel makers to have maintained and developed the ancient art of cask and vat making. Using the specific techniques of cabinet making and carpentry, this fine art belongs to the great tradition of craftsmanship.

TRACEABILITY

We attach particular importance to the traceability of our timber and keep the certificate of origin for each batch.

A serial number is allotted to each article produced. This number is stamped on the end of each stave and on an individual identification plate.

Top quality oak of French origin

To make our vats and casks, we exclusively select barrel-grade French oak coming from the most prestigious forests (mainly from Central France). The wood is dried in the open air for a minimum of 3 years, ensuring optimal maturation.

Each piece of timber (trunk of the tree sawn into planks) must be perfectly straight, with a good size diameter and a medullary ray (or thread) perfectly parallel to the sides so as to guarantee maximum water tightness.

The wood is subject to a strict and methodical selection. Only the top-quality pieces, situated between the sapwood and the heart of the tree, and with good width, are chosen.

Following selection, samples of wood from each piece are sent to an independent laboratory to analyze the presence of any possible organochlorine derivatives. It is only upon confirmation that the analysis result is compliant that receipt of the wood is validated.

A second sample is taken on the finished product in accordance with our HACCP procedures.

ELEGANCE AND TRADITION

Whether it be for vinification or for aging, oak vats and casks offer numerous benefits, and can be adapted according to your technical and oenological objectives.

- These prestigious containers **subtly enhance the wine with aromatics**, an unbeatable thermal inertia and a unique **micro-oxygenation**.

- Thanks to their truncated cone shape, the oak casks ensure an excellent **exchange between the must and the juice** during vinification, resulting in a better extraction.

- A **wide range of oenological** accessory options (thermoregulation, taps, doors...) helps complete the technical features.

The blond color of these prestigious containers adds beauty to the finest cellars, giving an unmistakable added value to the image of the cellars' brands.

HAND CRAFTED, TAILOR-MADE PRODUCTS

An expert for over 70 years in the art of making vats and casks for fermenting and aging wines and spirits, Radoux possesses an authentic savoir-faire combining tradition and innovation.

Each vat or cask is unique, created by Radoux's research team and made mainly by hand by an expert team of master coopers.

The vats and casks are made in a dedicated workshop in Jonzac, where the cask makers use the utmost care while applying traditional ancestral techniques.

Each individual piece is prepared and assembled by hand.

The staves are tightened traditionally over a wood fire and held together with wooden pegs.

The toast lasts several hours and is carried out in the traditional method over a wood brazier. Toasting varies depending on the size and future use of the container.

The finishing of the vat or cask body and head is done by hand with great care to guarantee our customers receive an end product with perfect aesthetic appearance.

A food-safe, open pore varnish can then be applied to protect the wood from water.

The galvanized hoops, either unpainted or painted in the color of your choice, are then put into place.

A TIMELESS SAVOIR-FAIRE

Radoux was selected by the Historic Cellars of the Hospices de Strasbourg to replace the cask made specially to hold the oldest wine in the world (1472).

This exceptional work of art needed hundreds of hours to create and called upon the skills and virtuosity of Radoux's Meilleurs Ouvriers de France and Compagnons du Devoir. This technical challenge confirms Radoux's position as world leader for its expertise and reputation.

Accompanying your project

Over the many years spent manufacturing casks, we have gained the experience and expertise which are essential in helping you succeed with your projects. From research to setting up your vats or casks, we pay careful attention to your requirements when it comes to planning and finalizing technical installations which are efficient, aesthetic and sustainable.

1 Diagnosis

To enable us to give you the best advice, we appraise the situation and define your project with you. Whether it be the installation of a vat or the overall design of a new vat cellar, we are here to guide you with the definition of your objectives while taking into account the technical and human constraints.

2 Tailor-made design

Truncated cone shape vats, round or oval casks of varied sizes are custom-made, depending on your oenological objectives (vinification or aging) or on your technical constraints. They are entirely customizable.

3 A wide range of accessories

We offer a full range of accessories to optimize the function of your wooden containers. All of our accessories are made of **316L** stainless steel and are made to order according to the size of the vats or casks. Moreover, they meet with the strictest safety & hygiene requirements.

Our commitment

Our team of cask makers is at your disposal to guide you with the installation and assembly of your large capacity containers. Depending on the configuration of your cellars, your vats and casks can be delivered ready to be installed or dismantled and re-assembled on site.

We are here to advise you throughout the life of your products, from the initial set up, to post vinification cleaning and exterior maintenance.

SEATING (options)

Our products are delivered with oak chocks. These should then be placed on seating : wooden, concrete, stone... (not included). As an option, we can offer complete sets, in oak or stainless steel, to ease the movement and set up of the casks.

VATS

Our
commitment

Sustainable development

Just like the vine and the wine which span generations and only reach maturity after years of care, oak is a rare and precious raw material which evolves over time. It is therefore only natural that Radoux committed itself many years ago to supporting sustainable development.

This approach is three dimensional:

Environmental

We guarantee the traceability of the wood from the forest to the finished product. Our traceability system (certified **ISO 9001** and recognized by **Bureau Veritas**) guarantees the French origin of the Radoux barrels "Chêne Français Origine Contrôlée"*. We pay close attention to the preservation of our oak wood resources. Our French oak **PEFC** certification recognizes that we respect environmental, social and economic functions of the forest.

Our cooperage, stave mill and site for the manufacture of wood for oenology are subject to the Classified installation for the Protection of the Environment. They undergo strict controls with regard to emissions (water and air) and safety regulations (fire detection and intervention) in order to preserve the environment. We are also careful about the visual and noise integration (acoustic ceiling, sound insulation walls, machine cladding...) in our installations.

Economic

We pay special attention to reducing our consumption of raw material by having our own wood purchasers carry out a strict selection of barrel grade timber in the forest.

Our optimization software for the transformation of logs associated with the laser machining tools allows us to extract top quality raw material. The entire transformation process is monitored by computer with wood performance indicators.

The majority of by-products resulting from our production are recycled. The bark, sawdust, sapwood etc. are used to produce energy or are incorporated into the production of paper or minerals. Dry oak wood shavings are used in our braziers to heat the barrels.

Any barrel grade oak presenting defects impacting the aesthetic or mechanic quality of the future barrel is used to manufacture chips (after maturation in our wood yard, crushing and toasting in our own installations, thus limiting transportation and the resulting carbon footprint).

Social

We are concerned about the health and safety of our employees and are therefore constantly improving our equipment and working conditions (especially noise, dust and ergonomics). This is reflected in our Unique Document for the Evaluation of Risks and in the periodic meetings of our Committee of Hygiene, Safety and Working Conditions.

Our Management Chart encourages and favors trust, initiative, training and listening to our staff in the Radoux family spirit which has existed since 1947. Annual appraisals help maintain and develop the competence and expertise of our staff, which are essential in light of the quality requirements in manufacturing our premium products. We adhere to labor laws within our own teams and those overseas.

PEFC Certification

Respect of environmental, social and economic functions of the forest.

Traceability

Certificate N° 059/RE of recognition by Bureau Veritas of French origin of Radoux barrels "Chêne Français Origine Contrôlée" (mention «Origine Contrôlée» on invoice).

Recycling

The majority of by products from our production are recycled

Offices & Workshops

We are constantly improving our equipment and working conditions.

Training

Developing competence and expertise of our staff.

Spirit of partnership

Customer satisfaction is the foundation of our company culture. We are constantly attentive to our customers' needs, and therefore not only do we seek excellence for our products through our integrated R&D (certified ISO), we also work in partnership with international universities and wine research centers.

With long term relationships in mind, we ensure our customers are completely satisfied with our services, by qualifying and controlling our raw material, monitoring the production, and dealing with the feedback received from our sales team/oenologists and our team providing technical support to customers.

Lastly, as the world of wines and spirits reflects a certain « art de vivre », we also support projects such as the Cité du Vin in Bordeaux.

Quality references

The **ISO 9001** certification validated our **Quality Management System** in 1995. This engagement to quality, anchored in the culture of the company since its creation, currently concerns the following areas :

- Quality of conception, manufacture and sales of 225 to 500 liter barrels
- International technical support to customers
- Control of critical points of food safety during production
- Safety of staff and equipment
- Reduction of the impact of our activity on the environment
- Control of receipt and maturation cycle of raw staves

Respect of regulations

Radoux ensures the sanitary and organoleptic safety of its barrels through:

- The use of the HACCP method in accordance with the recommendations of the Fédération des Tonneliers de France
- Control programs of the raw material, consumables, water and atmosphere (TCA, TBA, PCP...)
- Control programs of maturation time, grain, temperature of the toast
- Identification and strict traceability at every stage of production

Our team

Customer satisfaction is the foundation of our company culture. It is what motivates our high-quality standards and our strategy of research and innovation.

Radoux's first commitment is to deliver a product which fully complies with our customers' requirements, and to do everything possible to improve customer satisfaction. Our constant aim is to plan, develop, control and improve every aspect of our production facilities and our working methods.

An oenologist and sales person are permanently at your disposal. They are professionals in wine tasting, and can advise you on the type of barrel which will meet with your requirements. They check on conformity of the products on delivery, and come to your cellars regularly to monitor the aging process and at the end of this process assess with you whether any adjustments should be made for the next vintage. Radoux takes its expertise into your cellars with personalized tasting trials carried out by our team of specialists based in all the wine regions worldwide. An after-sales service is also available to offer advice on how to use and maintain your barrels.

Radoux is a fully committed, trusted, long term partner of your Cellar Masters and oenologists. The "best" barrel is the one that will allow you to obtain exactly the type of wine you are seeking to produce.
